## DETAILED ACTION

### *Allowable Subject Matter*

1. The following is an examiner's statement of reasons for allowance: The instantly claimed process for the production of an ester of creatine and a lower alcohol is patentable over the closest art of record: Dox et al (Journal of Biological Chemistry, Esterification of Creatine, 1992, 54 pages 671-673) and Nudelman et al (Synthetic Communications, Acetyl Chloride –Methanol as a Convenient Reagent for: a) Quantitative Formation of Amine Hydrochlorides b) Carboxylate Ester Formation c) Mild Removal of N-t-BOC-Protective Group, 1998, 28, pages 471-474). Applicants have persuasively argued (Amendment, first full paragraph page 9 and paragraph bridging pages 9 and 10) that the 11% or greater increase in yield obtained with *in situ* catalyst generation over that obtained by the process of Dox could not have been expected by one of ordinary skill in the art and therefore constitutes an unexpected result. The instantly claimed process is therefore patentable over that taught by Dox and Nudelman.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
